

THE ANGULAR FRAMEWORK

- A JS frontend framework (TS technically)
- Origins: AngularJS
- Managed and updated by Google for some time
- current version is v18 ... will use v17 (better docs)
- single-page application framework (SPA)

- ↳ one HTML file (index.html)

↳ it contains our app

- ↳ navigating from one "page" to another just loads new content into a certain area of our application

COMPONENT STRUCTURE

- HTML, TS, CSS, testing file
- self-contained, repeatable unit composed of
- can nest as much as you want
- can feed in data to display different info per instance
- the app itself is a component
